

# DATA SHEET

## Infrared measuring device FoodPro Plus

### Description

Norm	EN 61326-1 (EMV), electromagnetic emission and susceptibility, class B, EN61010-1 general safety
Certificates	CE, NFS, CMC
Artikelno.	0560 0031

### Characteristics features

- Measurement Target Spot Illumination with high brightness LED
- HACCP temperature danger zones indicated with safe / unsafe LEDs (green / red)
- Washable ergonomic handle
- Indication in °C or °F
- 7 sec hold display function for easier reading
- Auto switch off function
- Display max. temperature and integrated timer clock

### Areas of application

- Food control
- Food transport and stocking
- Cold chain
- HACCP applications

### Technical data

Infrared measuring device			
Temperature measuring range	-35...+275 °C (IR) -40...+200 °C (penetration probe)		
Accuracy	-10...+65 °C -30...-10 °C	Immersion Probe ±0,5 °C ±1 °C	IR-Measurement ±1 °C ±10 % of the measured value
	+65...+200 °C	±1 % of the measured value	±1,5 % of the measured value
Resolution	0,1		
Distance Spot ratio	2,5:1		
Spectral response	8...14 µm		
Emission factor	Factory set: 1,0 for T < 25 °C , 0,97 for T > 25 °C		
Smallest measuring spot	12 mm		
Response time	<500 ms (IR); approx. 8 sec. (penetration probe)		
Measuring point marking	High-performance LED, red		
Environmental temperature	0...+50 °C, max. 90 %RH		
Storage temperature	-20...+60 °C		
Battery	9V Alkaline (min. 10h at 23 °C)		
Protection category	IP54		
Dimensions	165 x 32 x 50 mm		
Dimensions penetration probe	Ø 3 x 80 mm		

### Description

The FoodPro Plus is an infrared thermometer, especially developed for contactless temperature measurement in foods, thus possible contaminations of the good during the measurement is avoided. Thanks to the high brightness LED the contours of the spot is exactly delimited, allowing the user to define exactly where the measurement has to be taken. A penetration probe is integrated to control the core temperature. A display for max. temperature and a timer clock to observe the prescribed measurement time is also integrated. The device is washable and has an ingress protection of IP54. The recommended distance is 25 to 250 mm (measuring spot Ø12...100 mm). The temperature values are hold for 7 sec on the display, so the user can easily read out and protocol the measurement. Whether the measurement is taken on frozen or warm food good, the green / red LEDs on the FoodPro Plus indicates unmistakably the HACCP potential unsafety of the measured goods.

- Green: temperatures are within safety guideline and outside danger zone
- Red : Warning temperatures are inside the HACCP danger zone and are potentially unsafe
- Temperature range for the danger zone is factory-set between 4 °C to 60 °C
