

KTY silicium temperature sensors

Description

Description

The silicium-sensors of the series KTY are elements with a semiconductor layer.

They have a positiv temperature-coefficient but possess in opposition to PTC thermistors a relatively linear characteristic.

If you handle or treat the KTY-sensors, please mind that they are sensitive against electrostatic charge and could thus be damaged in their long-term behavior.

Technical data

KTY Silicium-Temperature sensors	
Type	KTY 81/110
Housing	TO92
Temperature range	-55...+150 °C
Tolerance	±1 %
Ground-Resistance	(R_{25}) 1000 Ω
Response time	approx. 2 s

KTY Silicium-Temperature sensors	
Type	KTY 81/210
Housing	TO92
Temperature range	-55...+150 °C
Tolerance	±1 %
Ground-Resistance	(R_{25}) 2000 Ω
Response time	approx. 2 s

Ordering numbers

Article	Article no.
Temperature sensor KTY81-110	0365 0028
Temperature sensor KTY81-210	0365 0020
